EDUCATION

University of Georgia August 2023 - December 2027
Bachelor of Science in Computer Science. GPA: 3.5 / 4.00

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, Swift
Frameworks: React, React Native, Next.js, FastAPI, Node.js, Spring Boot, SwiftUI
AI and Data: PyTorch, Pandas, Scikit-learn, Qwen, Gemini, Ollama, MongoDB, Supabase
Platforms and Tools: Authentik, Amazon Web Services (AWS), GitHub, Expo, Tailscale

PROJECTS

FareLocker | Python, FastAPI, PostgreSQL, React, NumPy, pandas, Docker, Gemini October 2026

- Built a travel price-protection platform that sells short-dated American put options on live airline fares across **100+** flights, with a wallet ledger and automated early-exercise and settlement jobs.
- Added natural-language flight search with Gemini and an iMessage channel, sharing auth and wallet logic with the web app, extending the product to mobile
- Co-designed a statistical pricing pipeline in Python that fits per-route fare curves to historical data and generates real-time price quotes.

Kappa Theta Pi iOS App & Website | Swift, SwiftUI, Authentik June 2026

- Led development of Kappa Theta Pi's native iOS app and Next.js/React member platform, unifying announcements, events, calendars, messages, directories, files, photos, polls, and attendance tools for **100+ active users.**
- Implemented Authentik single sign-on through NextAuth/OIDC, role-based portals for members, administrators, pledges, and rushees, and server-side API access that keeps authentication tokens out of the browser.
- Built reliable session handling with token refresh and protected routing, plus reusable product components and responsive light/dark-mode interfaces across web and mobile experiences.

TradeWise AI | Python, FastAPI, PostgreSQL, React, NumPy, pandas, Docker April 2026

- Built an award-winning market analysis platform processing live and historical data for three stocks across one-, five-, and fifteen-minute intervals.
- Implemented **20 FastAPI** endpoints connecting model-backed analysis to a Next.js product and supporting backend integration and performance tracking.
- Integrated 0.5B and 7B parameter Qwen models for news summarization and trade reasoning, reducing processing time by **56.7 percent**.

Apothokeep | React Native, TypeScript, Node.js, MongoDB, Gemini February 2026

- Designed a product-data validation and prediction workflow combining USDA records with Gemini, achieving **95 percent** accuracy.
- Built a barcode-scanning application that eliminates manual entry across more than **10,000 product records** and improved response time by **23 percent** through MongoDB query optimization.

TECHNICAL EXPERIENCE

Devs On WallStreet, Web Developer (Executive Board) | Athens, GA April 2026 - Present

- Lead web-platform development with an executive-board team, translating needs into prioritized features and iterative releases.

Kappa Theta Pi, Software Developer | Athens, GA January 2026 - Present

- Built and demoed 10+ full-stack and mobile projects with React, FastAPI, and SwiftUI for 60+ chapter members, driving the chapter's adoption of Swift and Xcode.
- Maintained the Kronos server environment, handling container orchestration, resource allocation, and uptime monitoring to keep backend services stable and available.

INVOLVEMENTS

ColorStack, Member | Atlanta, GA August 2023 - Present

- Participate in mentorship and software engineering career-development programs, building 30+ professional relationships through networking.
