EDUCATION

University of Georgia

August 2023 - December 2027

Bachelor of Science in Computer Science

GPA: 3.5 / 4.00

TECHNICAL SKILLS

Languages: Python, SQL, Java, TypeScript, JavaScript, Swift,

Frameworks & Web: React, Spring Boot, Node.js, FastAPI

Databases & Data Engineering: MongoDB, Firebase, PyTorch, Pandas, Scikit-learn, Qwen, Gemini, Ollama

Systems & Infrastructure: Amazon Web Services, Docker, GitHub, Tailscale, Expo, Authentik

PROJECTS

[Kappa Theta Pi iOS App & Website](#) | Swift, SwiftUI, Authentik

June 2026

- Led development of Kappa Theta Pi's native iOS app and Website member platform, unifying announcements, events, calendars, messages, directories, files, photos, polls, and attendance tools for **100+ active users**.
- Implemented Authentik single sign-on through NextAuth/OIDC, role-based portals for members and server-side API access that keeps authentication tokens out of the browser.
- Deployed and containerized the app's backend on **Kronos**, a datacenter server to eliminate reliance on paid cloud or SaaS dependencies.

[TradeWise AI Third Place, Devs On WallStreet](#) | React, Python, FastAPI, Qwen

April 2026

- Built an award-winning market analysis platform that processes live and historical data for three selected stocks across **one-, five-, and fifteen-**minute intervals
- Implemented **20** FastAPI endpoints that connect model-backed analysis to an easily accessible user experience as well as supporting responsive performance tracking.
- Integrated and evaluated Local AI models for news summarization and trade reasoning, reducing processing time by **56.7%**.

[Apothokeep](#) | React Native, TypeScript, Node.js, MongoDB, Gemini

February 2026

- Designed a product-data validation and prediction workflow that combines United States Department of Agriculture records with Gemini, reaching **95%** prediction accuracy.
- Created a barcode-scanning application that removes manual entry across more than **10,000** product records and improved response time by **23%** through MongoDB query optimization.

[Self-Hosted AI Music Platform](#) | React, MongoDB, Spring Boot, Tailscale, Ollama

November 2025

- Automated deployment of a self-hosted backend and Ollama model service, enabling private cross-device access without external cloud model dependencies.
- Configured Tailscale authentication across multiple networks to support secure model-service access and reliable testing between devices.

TECHNICAL EXPERIENCE

Devs On WallStreet, Web Developer (Executive Board) | Athens, GA

April 2026 - Present

- Led web-platform development with an executive-board team, translating needs into prioritized features and iterative releases.

Kappa Theta Pi, Software Developer | Athens, GA

January 2026 - Present

- Built and presented personal software projects to fellow members, leveraging emerging technologies to improve technical decision-making, usability, and communication.
- Maintained the Kronos server environment, handling container orchestration, resource allocation, and uptime monitoring to keep backend services stable and available.

INVOLVEMENTS

ColorStack, Member | Atlanta, GA

August 2023 - Present

- Participate in mentorship and software engineering career-development programs and build more than 30 professional relationships through networking
