PROFESSIONAL SUMMARY

Computer Science student with experience building backend services, data pipelines, and user-facing products. Developed FastAPI services, automated backend deployment, and improved application performance; familiar with AWS, GitHub, and secure multi-network access. Seeking a Cloud Ops Software Engineering internship focused on reliable automation and scalable services.

EDUCATION

University of Georgia

Bachelors in Computer Science. GPA: 3.5 / 4.00.

December 2027

PROJECTS

TradeWise AI

April 2026

Third Place, Devs On WallStreet

- Built an award-winning market analysis platform processing live and historical data for three stocks across one-, five-, and fifteen-minute intervals.
- Implemented **20 FastAPI** endpoints connecting model-backed analysis to a Next.js product and supporting backend integration and performance tracking.
- Integrated 0.5B and 7B parameter Qwen models for news summarization and trade reasoning, reducing processing time by **56.7 percent**.

Apothokeep

February 2026

- Designed a product-data validation and prediction workflow combining USDA records with Gemini, achieving **95 percent** accuracy.
- Built a barcode-scanning application that eliminates manual entry across more than **10,000 product records** and improved response time by **23 percent** through MongoDB query optimization.

Kappa Theta Pi iOS App

June 2026

- Developed a native member hub consolidating events, messages, career opportunities, photos, and a protected directory in one mobile experience.
- Connected chapter services to live calendar and photo content and built reusable navigation, typography, and light and dark mode theming.

Self-Hosted AI Music Platform

November 2025

- Automated deployment of a self-hosted backend and Ollama model service, enabling repeatable service setup and private cross-device access without cloud dependencies.
- Configured Tailscale authentication across multiple networks for secure model-service access and cross-device testing.

ACTIVITIES & LEADERSHIP

Devs On WallStreet

April 2026 - Present

Web Developer, Executive Board

- Lead web-platform development with an executive-board team, translating needs into prioritized features and iterative releases.

Kappa Theta Pi

January 2026 - Present

Member

- Build and present personal software projects to fellow members, applying emerging technologies to improve technical decision-making and communication.

ColorStack

August 2023 - Present

Member

- Participate in mentorship and software engineering career-development programs, building 30+ professional relationships through networking.

SKILLS

Languages / Frameworks: Python, TypeScript, JavaScript, Java, SQL, Swift, React, React Native, Next.js, FastAPI, Node.js, Spring Boot

AI and Data: PyTorch, Pandas, Scikit-learn, Qwen, Gemini, Ollama, MongoDB, Firebase

Platforms and Tools: Amazon Web Services, GitHub, Tailscale, Expo, Authentik
